FirePro in potentially explosive atmospheres (ATEX)

FirePro ATEX Condensed Aerosol Generators are designed to operate in potentially explosive atmospheres. Local authorities have the responsibility for defining a Class, Zone, and Group classification for specific areas. The classification given to a particular zone, and its size and location, depends on the likelihood of an explosive atmosphere occurring and its persistence if it does. Areas classified into zones (0, 1, 2 for gas-vapor-mist and 20, 21, 22 for dust) must be protected from effective sources of ignition.

Approved to the ATEX directive 2014/34/EU (Ref Chapter III, art. 10)

Model	Weight		Dimensions	Approvals
	Net (g)	Gross (g)		
FPX-0100EX	100	1,830	170 x 84mm diam	
FPX-0200EX	200	2,315	200 x 84mm diam.	
FPX-0500EX	500	3,770	310 x 88mm diam.	
FPX-1200EX	1,200	17,050	365 x 450 x 310mm	
FPX-2000EX	2,000	21,650	365 x 450 x 310mm	
FPX-3000EX	3,000	22,450	365 x 450 x 310mm	
FPX-5700EX	5,700	33,710	365 x 450 x 420mm	

FirePro Certified for potentially explosive atmospheres (ATEX)

FirePro has also been specifically certified under ATEX guidelines for hazardous environments. FirePro aerosol generators can be used in:

Ex I M1 Ex s T450ºC Ma

Ex II 1G Ex s IIC T3 Ga

Ex II 1D Ex IIIC T200ºC Da

The local authority has the responsibility for defining a Class, Zone, and Group classification for specific areas.

Equipment Group		Equipment Category	Protection Level	Presence or Duration of Explosive Atmosphere	Hazardous Area Zones
I	Underground Mines and Associated surface installations	M1	Very High	Constant Risk or Presence	
		M2	High	Constant Risk or Presence	
II	All Other Surface Installations	1	Very High	Continuous Presence	Zone 0 / Zone 20
		2	High	Likely to Occur	Zone 1 / Zone 21
		3	Normal	Unlikely to Occur	Zone 2 / Zone 22

Dusts	Category M1, M2 & 1 Equipment		Gases, Vapours and Mists
Place in which an explosive atmosphere in the form of a cloud of combustible dust in air is present continuously, or for long periods or frequently.	Zone 20:	Zone 0:	The part of a hazardous area in which a flammable atmosphere is continuously present or for long periods.
Category 2 Equipment			
Place in which an explosive atmosphere in the form of a cloud of combustible dust in air occurs occasionally. **Group III** IIIA Combustible flyings **Group III** IIIB Non-conductive dust **Group III** IIIC Electrically conductive dusts	**Zone 21**	**Zone 1**	That part of a hazardous area in which a flammable atmosphere is likely to occur in normal operation **Group II** IIA (Propane, Methane) **Group II** IIB (Ethylene) **Group II** IIC (Hydrogen)
Category 3 Equipment			
A place in which an explosive atmosphere in the form of a cloud of combustible dust in air is not likely to occur in normal operation or will persist for a short period only. **Group III** IIIA Combustible flyings **Group III** IIIB Non-conductive dust **Group III** IIIC Electrically conductive dusts	**Zone 22**	**Zone 2**	That part of a hazardous area in which a flammable atmosphere is not likely to occur in normal operation, and if it occurs, it will only exist for a short period **Group II** IIA (Propane, Methane) **Group II** IIB (Ethylene) **Group II** IIC (Hydrogen).

Mining and Surface Certification (MASC)

FPX-0100EX / 0200EX / 0500EX aerosol units have additional certification
