

FIREPRO TRAINING COURSE

FirePro is a Pre-Engineered system that is certified to International and Australian Standards. With no high pressure and no pipework, FirePro does not require expensive maintenance procedures and is suitable for all types of risk.

As a safety product only suitably trained and CERTIFIED technicians in should be used for the installation and maintenance of the systems. These procedures must be in strict accordance with the Installation and Maintenance Manual, and the applicable standards.

The FirePro training course includes:

- Technical description of the product and how it works to extinguish a fire. Including a live fire demonstration.
- Review of applicable standards including :
 - AS 4487-2013 – Condensed Aerosol Fire Extinguishing Systems-Requirements for system design, installation and commissioning. Main standard for Land based risks.
 - AS 5062-2016 – Fire Protection for Mobile and Transportable equipment.
 - NSCV-2018 – National Standard for Commercial Vessels issued by Australian Maritime Safety Authority.
- System Design calculations, review of design considerations including RF interference, methods of activation and selection and configuration of control equipment.
- System Commissioning. activation, and Maintenance requirements.
- Comparison of other fire protection systems.
- Applications and the regulative environments.
- Practical exploration of the Panels and wiring approach to FirePro systems.
- Installation practices and techniques
